DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 43 is rejected under 35 U.S.C. 102(b) as being anticipated by Kamp (4844358).

Kamp teaches an apparatus for use in a spinning place of a textile machine comprising a modularly structured, exchangeable winding unit (Abstract) being positionable in and removable from the spinning place, and interchangeable with other modularly structured, exchangeable winding units.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 17-42 and 44-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wassenhoven et al (5509261) in view of Kamp.

Wassenhoven teaches a textile machine for spinning fiber material into yarn comprising a plurality of spinning places (Abstract), each comprising a can (3) feeding device, a rotor spinning unit (7) powered by a reluctance motor (Abstract), an opening roller (Abstract), a winding unit (17), a central machine control unit (26) in communication with each of the plurality of spinning

places (not shown) and their respective control units, which are each also connected to each other (Column 4, lines 13-22). Wassenhoven also teaches an exchangeable robot for startup and piecing processes (20). While Wassenhoven essentially teaches the invention as discussed above, he fails to specifically teach modularity. Kamp teaches modularity in spinning machines, including a fully modular winding unit (Abstract). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to incorporate the modularity of Kamp in the spinning unit of Wassenhoven, so as to enable the quick and easy changing out of spinning units. The ordinarily skilled artisan would have appreciated this, and known to do such, allowing for less downtime and high production, something desirable in the spun yarn art.
